

## Midterm

- Utorok 17.4. 18:00, posl. A, čas 90 min.
- prezencia ISIC
- ide o 25 bodov
- test na papieroch,
- 5 príkladov na seprarovných papieroch, opravujeme oddelene
- témy až po prednášku StreamAPI
- vzory midtermov 2012-2017 sú na stránke predmetu
- midterm nie je o syntaxi, ale či veciam rozumiete (kódy nekompilujeme)
- syntax či font zaváži len, ak už nie je možné posúdiť, či rozumiete
- ŽIADNE elektronické pomôcky nie sú dovolené, ani mobil na lavici
- akékoľvek vlastné materiály sú povolené, nesmú "kolovať" lavicou
- nezničte lesy, čo ste nečítali, vám určite nepomôže
- dozor ochotne odpovie na vaše korektné otázky

## Kanonické usporiadanie

(riešenie TamaraS.)

```
public static String[] kanonickeUsporiadane() {
  Comparator<String> zoradPodlaDlzky =
     (prveSlovo, druheSlovo) -> prveSlovo.length() - druheSlovo.length();
  Comparator<String> zoradPodlaASCII =
     (prveSlovo, druheSlovo) -> prveSlovo.compareTo(druheSlovo);
List<String> povodnePismena = Arrays.asList(Letters);
  return
       IntStream.range(0, povodnePismena.size())
       .filter(ix -> ix >= 'A' && ix <= 'Z') // indexy písmen A..Z
       .sorted(zoradPodlaDlzky.thenComparing(zoradPodlaASCII))
       .collect(Collectors.toList())
       .toArray(new String[26]);
```

## Zhoda s vlastným kódom

} // vlozi do mnoziny interval hodnot [start..end]

```
public void add(T start, T end){
if(start instanceof Integer)
                                                                  for(Integer i = (Integer) start; i <= (Integer)end; i++)
                                                                                                           set.add((T)i);
